WaCRM Super Admin & SaaS Operations Manual

Complete Guide to Subscription Billing, Client Management & Automated WhatsApp Reminders

DOCUMENT OVERVIEW

This official document provides operational guidelines, configuration steps, and best practices for the WaCRM platform.

1. Platform Overview & Super Admin Privileges

WaCRM has been upgraded into a multi-tenant SaaS application. As the platform owner, you possess Super Admin privileges allowing you to manage customer workspaces, set billing parameters, track recurring revenue, and automate subscription renewal notices via WhatsApp.

- **Multi-Tenant Architecture:** Each client operates inside an isolated workspace with their own contacts, WhatsApp inbox, pipelines, and automations.
- **Super Admin Access:** Granted via profile.is_super_admin flag, NEXT_PUBLIC_SUPER_ADMIN_EMAILS env variable, or local Demo Mode.
- **Admin CRM Portal Location:** Accessible at the /admin route or by clicking the "Admin CRM (SaaS)" badge in the left sidebar.

2. Navigating the Admin CRM Dashboard

The Admin CRM dashboard displays real-time SaaS financial and operational metrics calculated directly from your tenant database:

- **Monthly Recurring Revenue (MRR):** Cumulative monthly revenue generated across all active paying subscribers.
- **Active Tenants:** Number of businesses currently enjoying uninterrupted access to their WhatsApp CRM.
- **Expiring Soon (<= 7 Days):** Accounts whose renewal date approaches within the current week, targeted for automatic payment reminders.
- **Past Due / Suspended:** Tenants who have not renewed past their grace period, triggering access warning banners.

3. Subscriber Management & Subscription Lifecycle

The Client Subscriptions table lists every business using your platform. Super Admins can search, filter, and take immediate action on any account:

- **One-Click Renewal (+30 Days):** Click the green "+30d" button when payment is received. The system extends the account period by 30 days, marks status as Active, resets reminder counters, and logs an audit transaction in subscription_payments.
- **Flexible Term Extensions:** Open the Renewal Dialog to choose +30 days, +90 days (Quarterly), or +365 days (Annual), input custom amount received, and log reference IDs (UPI, Stripe, Razorpay, or Bank Wire).

• **Suspend / Reactivate Toggle:** Instantly lock access if payment is delinquent. Suspended users see an in-app renewal screen with your payment link.

• **Edit Subscriber:** Customize individual plan names (e.g. Enterprise Custom), monthly rates, custom payment links, or billing phone numbers.

4. Automated WhatsApp Payment Reminders

The system includes an automated background cron engine (/api/cron/subscription-reminders) that safeguards recurring revenue:

• **3 Days Before Expiry:** Sends an advance, friendly reminder including the customer name, amount due, and your payment link.

• **1 Day Before Expiry:** Sends an urgent notification to ensure continuous WhatsApp connectivity.

• **Due Date / Past Due:** Notifies customer of expiration and prompts renewal to re-enable full capabilities.

• **Anti-Spam Protection:** Accounts receive at most one reminder in any 24-hour window, regardless of trigger frequency.

• **Instant Manual Reminder:** Click "Remind" in the table to send an immediate WhatsApp message via Meta API, or open a pre-formatted wa.me chat link.

RUNNING THE CRON ON DEMAND
Click "Run Daily Auto-Reminders" at the top-right of /admin to scan and dispatch all eligible payment reminders instantly.

5. Creating & Provisioning Customer Accounts (Step-by-Step)

Super Admins can directly create and configure client accounts without requiring the customer to go through public registration. This allows you to set up customized subscription packages, pricing, and initial validity upfront.

• **Step 1: Open the Creation Dialog:** In /admin, click the green "+ Create Customer" button located above the subscriptions table.

• **Step 2: Enter Business & Owner Profile:** Provide the Business/Company Name (e.g. Acme Textiles) and Owner Full Name (e.g. Rahul Sharma).

• **Step 3: Define Login Credentials:** Enter the customer login email. The system automatically pre-fills a secure password (e.g. Pass@4821), or you can specify a custom password.

• **Step 4: Configure WhatsApp Phone & Plan Tier:** Enter the client WhatsApp billing number with country code (e.g. +919876543210). Select plan tier: Monthly Pro, Starter, Business Plus, or Enterprise.

• **Step 5: Set Fee, Currency & Term Duration:** Input the monthly subscription amount (e.g. 999 INR or $49 USD). Choose validity duration: 14-day trial, 30 days (1 month), 60 days, 90 days (quarterly), or 365 days (annual).

• **Step 6: Status & Payment Link:** Select "Active" if payment was received in advance, or "Trial". Optionally attach a custom UPI/Razorpay payment link.

• **Step 7: Instant Handover via WhatsApp or Clipboard:** Upon submission, a popup appears displaying the portal URL, email, and password. Click "Copy Login Credentials" or "Send Credentials via WhatsApp" to dispatch welcome details directly to the client.

INSTANT ONBOARDING TIP

Using "Send Credentials via WhatsApp" opens WhatsApp with a ready-to-send welcome message containing the login link, email, and password so the customer can access their portal immediately.

6. Providing Ongoing Customer Support & Operations

As a SaaS provider, providing smooth onboarding and ongoing operational support to your clients ensures high customer retention. Here are the core support workflows:

- **A. WhatsApp Cloud API & Number Setup Support:** Help clients navigate to Settings -> WhatsApp to configure their Meta Phone Number ID, WhatsApp Business Account ID (WABA ID), and Permanent Access Token.
- **B. Testing Webhook Connectivity:** Ensure incoming messages and delivery receipts are received by verifying the webhook URL and verify token configured in the Meta Developer Portal.
- **C. Handling Subscription Renewals & Grace Periods:** When a client pays fees (via UPI, Bank Transfer, or Stripe), locate their account and click "Renew (+30d)". If a client requests a few extra days, use "Edit" to extend their expiry date manually without payment disruption.
- **D. Multi-Agent Team Support:** Guide clients to Settings -> Members to invite additional staff members. Admins manage account settings, while Agents handle day-to-day customer chats.
- **E. Delinquency Handling & Account Freezing:** If a client delays renewal, use the "Suspend" toggle to freeze their access. Their contacts, chat history, and automations remain 100% safe and intact until reactivated.
- **F. Client Account Offboarding / Deletion:** If a client permanently terminates their service, click the red Trash icon to remove their workspace completely from the database.

ZERO-DOWNTIME SUPPORT CHANNELS

Set your WhatsApp Support Number in /admin under Platform Settings. When a client encounters an expired subscription or needs assistance, their portal shows a direct "WhatsApp Admin" button linking to your number.

7. Payment Link & Template Customization

Under the "Payment Links & Reminder Settings" tab in /admin, configure platform-wide payment and messaging parameters:

- **Default Payment Link:** Paste your universal payment page (e.g., Stripe Payment Link, Razorpay Page, UPI payment URL, or PayPal link).
- **Customizable Variables in WhatsApp Template:** Use dynamic tags: {{name}}, {{account_name}}, {{due_date}}, {{amount}}, and {{payment_link}}.
- **Admin Support Number:** Provide your WhatsApp phone number. Expired customer portals show a "WhatsApp Admin" button linking directly to you.

8. Vercel & Supabase Production Deployment Checklist

- **Database Migration:** Execute supabase/combined_all_migrations.sql (which contains Migration 043) in your Supabase SQL Editor.

• **Automated Vercel Cron Schedule:** Configure vercel.json to trigger /api/cron/subscription-reminders daily at 09:00 UTC.

```
{ "crons": [{ "path": "/api/cron/subscription-reminders", "schedule": "0 9 * * *" }] }
```
